

The background of the cover is a deep blue. In the center is a stylized, textured map of the Earth, showing the continents. Three radio towers are depicted: one on the left, one in the center, and one on the right. Thin lines representing radio signals radiate from the towers towards the Earth. At the top, three horizontal banners are stacked, each with a wavy, ribbon-like edge. The top and bottom banners are white, while the middle one is grey. The text is printed in red on these banners. In the bottom right corner, there is a solid red circle containing white text.

WORLD-RADIO

HANDBOOK

for Listeners

1950 · 1951

IT'S NEW!

IT'S A NATIONAL!

**NC
125***

IT'S PACKED WITH BIG SET FEATURES!

IT'S MODERATELY PRICED!

- Covers 550 kcs to 36 mc in 4 bands. Voice or CW.
- Edge-lighted direct-reading scale with amateur, police, foreign, ship frequencies clearly marked.
- Sensational National Select-O-Ject built-in. Rejects any selected audio signal (100-12,000 c.p.s.) 45 db — boosts 38 db. Minimizes noise, unwanted signals.
- 3-microvolt sensitivity (for 10 db signal/noise ratio on 10-meter band).
- Lively S-meter on panel — reads 59 to 50 mv. signal.
- Up-to-the-minute features include: AVC, automatic noise limiter, antenna trimmer, variable CW pitch control, separate R. F. and audio gain controls, jack for phono or NFM-73B adapter, volt. reg., stabilized oscillator, audio amplifier essentially flat to 10,000 c.p.s. when used with phono.

PREFACE

*C*ruising on the ether waves" is steadily increasing in popularity among radio listeners throughout the world.

That is a most welcome sign. For there can no longer be any doubt but that this planet of ours is growing smaller every day, and that events and problems in the remotest parts of the globe can have a decisive effect upon our own lives, in whatever country we may be domiciled. Conversely, a better, deeper understanding of »the other fellow's point of view«, his way of life and cultural background, etc., can lead – utopian as this may sound – to happier conditions for all of us.

Travellers who have the good fortune of visiting different countries, and meeting different peoples, know from experience that contact with members of other nations can, and does, create enduring friendships. – Those of us who can travel only "by ear" know, similarly, that world-listening, too, helps to foster good fellowship.

New broadcasting stations, increased power of old ones, better equipment resulting from the constant research of enthusiastic engineers and manufacturers, and the great work done by leading national and international bodies, provide ever improving listening facilities, while program directors, producers and others, with an increasing number of the foremost national and international artists and experts in every field of human knowledge supply listeners with ever more enjoyable as well as inspiring listening fare.

It is, therefore, most gratifying to me that this WORLD RADIO HANDBOOK, which is a labour of love and enthusiasm actuated by a profound hope for understanding between all nations, is gaining growing recognition from official organizations, such as UNO, UNESCO, UER, and many of the large broadcasting companies who play such an important role in promoting this desirable state of affairs.

This new edition is of special importance in that, apart from the numerous corrections, amendments and revisions which a reference book of this nature involves from year to year, it includes the many wavelength changes agreed at this year's Copenhagen Radio Conference. – In fact, the book has been completely re-set throughout to take care of all the new data from existing as well as many new stations which have come into operation since the last edition.

It thus becomes invaluable to every broadcasting station and regular listener, for whom it constitutes an unique "Who's Who" and ready-made logbook of the world's broadcasting stations.

New features include a more helpful Introduction, an extension of the list of Long and Medium Wave Stations to cover most of the world, details of the Standard Frequency and Time Signal Transmissions, particulars of new FM and Television Stations, etc.

In compiling this new edition, I have been given generous assistance by faithful old friends and many new collaborators, as well as by most of the world's broadcasting organizations, to all of whom it is my duty and distinct pleasure to express my thanks here. – At the same time I hope most sincerely that many more official organizations and broadcasting authorities will appreciate, and support, my efforts of providing listeners everywhere with a reliable means of making *round-the-clock* and *round-the-world* listening easier, and more pleasurable.

I am gratified that an opportunity is afforded me in this edition to publish a message from the UNITED NATIONS and from UNESCO.

While every endeavour has been made to ensure accuracy of the information, a book of this kind needs the constant help of friends pointing out errors and changes, and providing additional data.

Suggestions for improvements will be most welcome, as will be the co-operation of all world-listening friends.

I have to express thanks to the international broadcasting organizations, the Danish representatives abroad, the Danish Society and "Kraak's Legat" for kind support and co-operation.

Happy listening!

O. LUND JOHANSEN

UNITED NATIONS

Every day, throughout the year, voices speaking from Lake Success in 29 languages are telling the most important story in the world. It is a story affecting the life of every man, woman and child, and reaching into the farflung corners of the world. It is the story of the search for world peace and what the United Nations is doing in a wide range of activities to fulfill the pledge made in its Charter to "save succeeding generations from the scourge of war." The story is told by United Nations Radio, whose familiar program opening, "This is the United Nations" is heard by listeners around-the-clock and around-the-globe.

United Nations Radio works on one simple, basic premise—one that was phrased by the London General Assembly of 1946 when it adopted a resolution containing these words: "The United Nations cannot achieve the purposes for which it has been created, unless the peoples of the world are fully informed of its aims and activities."

Thus it is that United Nations Radio is carrying out an essential, and in many ways a unique assignment. This stems from the very nature of the United Nations, an organization of 60 member states. Within this structure, United Nations Radio has the task of providing complete and impartial news coverage of the work of the organization and its Specialized Agencies. United Nations Radio is the only world-wide broadcasting service without a transmitting station of its own. However, thanks to the cooperation of national radio systems, the United Nations is able to speak to its widely scattered listeners by short wave, by relay, and by local rebroadcasts. Most transmissions carried from United Nations Headquarters in New York are broadcast over facilities provided by the United States State Department. The Canadian Broadcasting Corporation provides the United Nations with another direct major broadcasting outlet. The British Broadcasting Corporation, Radiodiffusion Française and other national radio networks have made possible the relay of United Nations programs.

The radio voice of the United Nations has a multi-lingual tongue speaking some 29 languages. Broadcasts direct, or by transcription, go out in the 5 official languages which are Chinese, English, French, Spanish and Russian. In addition, U.N. programs are broadcast in Afghani-Persian, Amharic, Arabic, Burmese, Czech, Danish, Dutch, Greek, Hebrew, Hindi, Icelandic, Indonesian-Malay, Italian, Norwegian, Persian, Polish, Portuguese, Pushtu, Serbo-Croat, Swedish, Tagalog, Thai, Turkish and Urdu.

Two basic program formats are used by United Nations Radio in reporting on the events of the world organization—those based on straight, factual news, and those of a feature or semi-dramatic character. Every day, news programs, presented with strict objectivity, tell radio listeners throughout the world about the latest United Nations developments. Through the Latin-American Service alone, broadcasts in Spanish, Portuguese and French reach all 20 Latin-American Republics over 226 stations comprising the "Network for Peace." And the listener response averages some one thousand letters a month.

Also, United Nations facilities are placed at the disposal of accredited radio correspondents to broadcast their dispatches on the world organization back to their national radio systems. In the feature field, there are direct broadcasts of important sessions with running, descriptive narration in English and French; weekly news summaries; actuality reviews semi-documentary reports on activities of the U.N. with the actual voices of delegates; interviews with leading world statesmen; and semi-dramatic programs.

In these times of international tension, the peoples of the world are more than ever in need of accurate information about the world-wide activities of the United Nations and the Specialized Agencies. In cooperation with national broadcasting systems, United Nations Radio is attempting to play its part in filling this need and, in this way, to promote international understanding.

Peter Ayles, Director of Radio Division

TO GET THE MOST OUT OF WORLD LISTENING,

read

“HOW TO LISTEN TO THE WORLD”

by O. Lund Johansen
and a team of international experts

**This booklet will open the world
to you, because it will**

- *Enable you* to receive stations in all countries.
- *Help you* to enjoy better, trouble-free radio.
- *Save you time* and trouble in choosing the best broadcasting stations.
- *Show you* how to get the best from your set.
- *Increase your pleasure* in listening to the world.
- *Increase your knowledge* of world affairs.

CONTENTS:

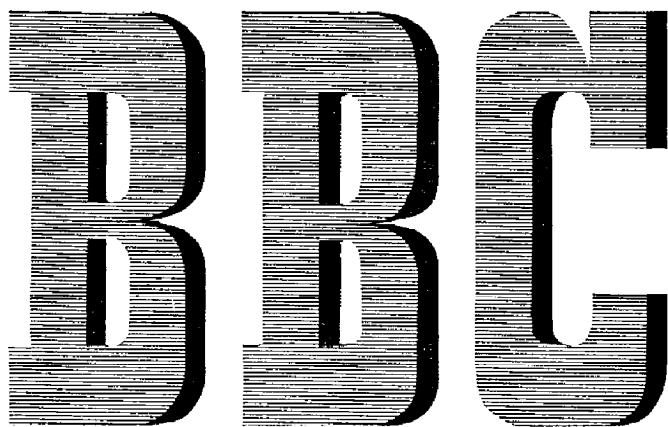

- The propagation of short waves.
- The Broadcast Bands.
- Wavelengths for best reception from all countries. at all hours and seasons.
- The best aerials for world listening.
- How to tune in for world listening.
- How to identify foreign stations.
- How to write a report.
- Experienced World Listeners of many countries share their experiences with you.

**PRICE: Only 1/6d or 30 cents per copy,
or the equivalent in local currency.**

LONDON CALLING

Follow the BBC shortwave broadcasts with London Calling! Each week it publishes advance details of programmes, wavelengths and coverage of the General Overseas Service in English and of the special Regional Services in English and other languages. London Calling also contains illustrated articles on life in Britain and abroad. Annual subscription (post free) 25/- sterling, or the equivalent in local currency.

THE LISTENER

You will enjoy reading this journal which publishes each week the best of the talks broadcast by the BBC. These talks are given by experts and cover a wide range of subjects including world problems, history, philosophy, art, music, literature and drama. Annual subscription (post free) £ 1 sterling, or the equivalent in local currency.

*Write for a specimen copy of London Calling
and The Listener, mentioning this advertisement,
to BBC Publications, (3), 35, Marylebone
High St., London, W. 1., England.*

INTRODUCTION TO WORLD LISTENING

The practical information given in the following section in respect of the broadcasting services of each individual country includes:

Population and number of **Licensed Listeners**. Where broadcasts are **commercial**, this is stated.

The Addresses of the broadcasting companies in question, together with their **cable addresses**.

Names and Titles of the leading personalities in each company.

List of Stations operated by each company with call signs of their transmitters, frequencies and wavelengths, as well as their power expressed in kilowatts. For Europe, North Africa and the Near East all broadcasting stations in operation are shown; for other countries this information is limited to short-wave stations and the more powerful long and medium wave stations.

Each short-wave station has its own identification call sign consisting of 3–5 letters or a combination of letters and figures of which the first, or the first two, denote the nationality in accordance with the international list of station prefixes. Some short-wave stations, the American for example, use these call-signs when announcing themselves.

Long and medium wave stations are divided into three categories, viz. (1) *Main Stations*, which are so powerful that they can generally be heard throughout the whole area of the country in question, and from which most of the broadcasts emanate; (2) *Regional Stations*, which can be heard only within a certain area of the country, and whose broadcasts consist partly of re-transmissions of the programs of the main stations and partly of their own programs; (3) *Relay Stations*, which solely re-transmit main station programs. These relay stations are the weakest, and are local stations which can be heard only within a limited area.

Most short wave stations use directional antennae, i.e. their broadcasts are directed towards particular areas, and these give the names to the various services: European Service, Near Eastern, Middle Eastern, Far Eastern, Pacific, Latin-American, Caribbean Service, etc. Language and frequency employed vary according to the area to which broadcasts are directed.

Daily Programs: Under this heading you will find information concerning the total broadcasting hours on the different frequencies employed during transmission hours, as well as a survey of the news and the more important regular feature programs on specific days.

Frequency and Wavelength.

Frequency and wavelength are divided into the following groups:

Long waves with frequencies from 133 kc/s (1961 metres) to 500 kc/s (600 metres).

Medium waves with frequencies from 500 kc/s (600 metres) to 3000 kc/s (100 metres).

Short waves with frequencies from 3000 kc/s (100 metres) to 30000 kc/s (10 metres).

Megacycles, kilocycles, metres are three different terms for the wavelength. 1 megacycle is equal to 1000 kilocycles. Megacycles are changed to kilocycles by multiplying megacycles by 1000. Kilocycles are changed to megacycles by dividing by 1000. Kilocycles are changed to metres by dividing kilocycles into 300000. Metres are changed to kilocycles by dividing metres into 300000. Metres are changed to megacycles by dividing metres into 300. – Kc/s means kilocycles per second = 1000 oscillations per second.

Short waves are divided into the following metre bands (m. b.):

49 metre band – 41 metre band – 31 metre band – 25 metre band – 19 metre band – 16 metre band – 13 metre band and 11 metre band.

Many short-wave stations lie outside these bands. The 60 and 80 metre bands are used for local broadcasting, i.e. for reception over relatively short distances, which applies, for example, to many South and Central American stations and stations in Central Africa.

The property possessed by the short waves of spanning great distances with strong signals has encouraged the countries of the world to make use of them for broadcasting purposes.

A careful examination of the behaviour of the various bands and their propagation characteristics has supplied engineers with invaluable information as to the most suitable frequencies for the different times of the day or months of the year, so that they can ensure maximum reception at any time in any part of the world in which they may be specifically interested.

The British Broadcasting Corporation (BBC), The Voice of America (U.S.A.), Canada, France, the Soviet Union, and many other large countries maintain comprehensive and extensive short-wave services for the benefit of listeners all over the world.

In the following pages you will find a large variety of call-signs and frequencies. In many cases these belong to the same transmitters which are connected to different aerials designed to radiate signals to the best advantage in respect of each service. The various call-signs serve to identify individual transmissions and frequencies.

Many programs are broadcast simultaneously over several transmitters on different frequencies, which enables you to select the one which is the most clearly audible in your area or on your particular receiver. If reception on one of the frequencies used is poor, you should examine reception conditions on the other frequencies employed by the same station.

Announcements:

The language alone is not a conclusive indication of the origin of a broadcast to which you may be

Berlingske Tidende

DENMARK'S LEADING DAILY

FOUNDED 1749

listening. Hearing a program in French or Spanish, for instance, does not necessarily mean that it is transmitted by a French or Spanish station respectively. To make sure of identifying a station correctly, it is, therefore, essential to wait for the announcement which every station broadcasts at regular intervals. These announcements are given in this book for practically all the stations listed.

Interval Signals:

For identifying stations it is also of importance to know the signals used during the intervals between program items. Under each station you will, therefore, find an indication of the type of signal used, and in many cases also a reproduction of the musical notes of this signal.

QSL Cards:

As indicated in the survey of the broadcasting services of the various countries, many of the stations listed are interested in receiving reports from listeners in respect of their transmissions. These stations acknowledge such reports by sending listeners a QSL (verification) card or a letter. For most of these stations it is stated whether reports are answered by QSL card or letter.

Many short-wave listeners make a hobby of collecting these QSL cards which are often elaborately designed and colourful, sometimes with pictures of the station and its location, photos of the personnel, and other interesting particulars.

Reports from Listeners:

Listeners' reports can in most cases be written in English, but Spanish is preferable when writing to South or Central American stations. Each report should contain information as to wavelength, date, time, program heard, intelligibility, strength of reception and whether there was any fading, i. e. variable strengths (QSB), interference from another station (QRM), and static, i.e. atmospheric interference (QRN). – In the case of an amateur transmitter, the report should also contain the call letters of the station.

Moreover, it is helpful to add details of your own location, as well as of the type of receiver and aerial used for listening. If reply postage is requested by a station, enclose with your reports an International Reply Coupon obtainable at most post offices.

Greenwich Mean Time (G. M.T.) should be used for all time indications. – The full address of each station will be found in the individual surveys for each country.

Intelligibility	Strength.	Interference.
QRK1 – unintelligible	QSA1 – unreadable	QRM – interference from another station
QRK2 – partly unintelligible	QSA2 – weak	QRN – atmospheric interference (static)
QRK3 – intelligible with difficulty	QSA3 – fairly good	QSB – variable strengths (fading)
QRK4 – quite intelligible	QSA4 – good	
QRK5 – easily intelligible	QSA5 – very good	

Future Plans:

Many stations have made known their development plans for the immediate future. These include: – Increase of power, new transmitters, F. M. and Television stations to be opened up, etc.

Lists of Long, Medium and Short Wave Stations:

A complete lists of the world's broadcasting stations, arranged in order of frequencies (pages 97-109).

Local Time Conversion:

On page 111 you will find a Local Time Conversion Table which gives the local times (summer and winter) in most parts of the world in relation to Greenwich Mean Time (G. M.T.). For example, from September to May it is 15.00 hours New York time when it is 20.00 hours G. M.T., since the table indicates that local time in New York is 5 hours ahead of G. M.T. From May to September U.S.A. introduces day-light saving time and, consequently, it is 16.00 hours New York time when it is 20.00 hours G. M.T.

How to tune in to your favorite short-wave station:

It requires some practice to adjust receivers correctly to a short-wave station. A movement to either side by a mere hair's breath may give the correct adjustment. Once the station has been found, it must be finely adjusted by gently turning the dial knob backwards and forwards, simultaneously increasing the volume until the station in question can be heard distinctly, and identified. If the tuning knob is turned too quickly, a weak station may easily be passed over.

Reception conditions for short waves can be very capricious. After listening to a far-distant station for a short time, it may suddenly disappear completely (fade) and not return immediately.

Some broadcasts are often transmitted over several wavelengths simultaneously. If after adjusting your receiver to the station to which you wish to listen, you find reception unsatisfactory, try the other wavelengths used by the same station during the period in question.

How to identify a short-wave station:

Whenever you come across a station which is unknown to you, proceed as follows for identification: Read the approximate frequency, which is indicated on the dial of your receiver in megacycles, kilocycles or metres. Look up the frequency table for stations located in the vicinity of this frequency. When you have reduced the source of the broadcast to one or two possibilities and at the same time noted details of the program heard and the language used, check these data against the program surveys printed in this Handbook. For confirmation it is advisable to wait for the station announcement or interval signal mentioned previously.

A Message from

UNESCO

In the last edition of the World Radio Handbook we described the part played by the Radio Division of Unesco in publicising the ideals and activities of that Specialized Agency of the United Nations. During the last year this small Radio Unit has covered an extensive amount of ground.

Working in its studio in Unesco House group of producers and engineers have recorded over five hundred different programmes in twenty-three languages, including little known languages such as Urdu, Hindi, Indonesian, Siamese and Viet-namese. Some 81 countries and territories use Unesco Radio Material, and 48 use the weekly "Unesco World Review" which is published in English, Arabic, French and Spanish.

Among the many distinguished scientists, scholars, educationists and artists of world renown who have been recorded by the Unesco Radio Division may be mentioned Sir Sarvepali Radhakrishnan, Madame Maria Monterossi, Professor Bertrand Russell, Professor Oliphant, Serge Kuossevitzky, Marian Anderson, Cancer Research specialist Dr. Alexander Haddow, and the President of the 4th World Conference on Energy Control, Sir Harold Hartley.

Over 2000 copies of these and other recordings have been despatched to all parts of the world. In this way a flow of ideas and knowledge is made possible through the medium of Radio in a manner which is not possible for most of the Radio organizations working within the limits of purely national boundaries. This, of course, is the real job of Unesco as a whole—to collect and select what the world has to offer in the fields of Education, Science and Culture, and then to give the fullest possible distribution of this information to all corners of the world. In this way it is believed that the people of the world will develop a richer knowledge and, therefore, a deeper understanding of each other, and so contribute to a final settlement of international differences.

radio Canada

Programs from Canada are beamed daily to Europe in English, French, Dutch, Czech, Slovak, German, Danish, Norwegian, Swedish, Italian, Finnish and Russian to the Caribbean and South America in English, Spanish, Portuguese, French and Dutch, and every Sunday in English to the Southwest Pacific.

Listeners in all countries are invited to tune in to Canada's International Service for a day-to-day chronicle of Canadian life and to write requesting a monthly program bulletin.

TABLE OF THE MOST SUITABLE METRE BANDS FOR BEST SHORT-WAVE RECEPTION IN EVERY PART OF THE WORLD AT VARIOUS TIMES OF THE DAY THROUGHOUT THE YEAR.

This Table provides a ready answer to the question: Which is the best waveband for listening to a certain country at a particular time of the day during any one of the four seasons of the year?

Example: A listener located in North America wishes to hear a station in Southern Asia on a January afternoon. By following the horizontal column of figures starting at North America A on the left until it meets the vertical column under South Asia in the Winter section on the right, he will come to the figure 25.—This means that the 25 metre band is the most suitable for listening to the required station at that time.

The listener's area			Area of the station required																							
			SUMMER							SPRING AND AUTUMN							WINTER									
			Europe	North America	South America	Africa	South Asia	East Asia	Australia	Europe	North America	South America	Africa	South Asia	East Asia	Australia	Europe	North America	South America	Africa	South Asia	East Asia	Australia

THIRD PROGRAM:

For an initial first experimental period the "Third" will be broadcast only from a FM Station and a Short-wave Station; subsequently it is to be extended to some medium wave stations of moderate power.

At the beginning, some of the outstanding afternoon transmissions of the "Third Programme" may also be broadcast - but not regularly - by RAI's Blue Network, in order to give more listeners an opportunity to follow this new channel.

DAILY PROGRAMS: Medium Waves:

23.00–24.00 (S. 00.15) to S.Am. in 19, 25, 31 m.b. and 190 m. For Norwegians abroad.

Every transmission to Norwegians abroad consists of: News, Local News, Talk and Music. The last 15 minutes consists of Norwegian music or music by Norwegian artists. This section is announced in both English and Norwegian.

“Norway this week” in English: Sun: 12.00, 14.00, 20.00, 24.00 and Mo. 02.00–02.15.

Every Saturday is broadcast in Norwegian and English a “Letter-Box” program (the last 1/2 hour of the broadcast), in which listener’s letters are answered and their musical requests are honoured.

From Tromsø to NA and NS Relay of Home Service. Reports to Norsk Rikskringkasting, Tromsø.

06.30–07.30 Weekdays (exc. Sat.)	on 9540 kc/s
07.55–14.45 Sundays	on 9540 –
06.15–08.20 Saturdays	on 9540 –
10.20–12.40 (Sat. 12.35)	on 9540 –
15.45–22.00 Weekdays (exc. Sat.)	on 7210 –

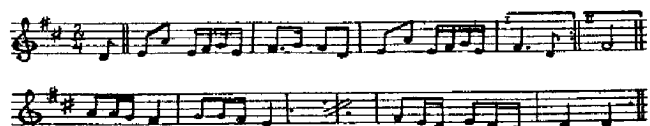

15.30–15.45 *Weekdays* in Samisk on 7210 –
 15.15–22.15 *Sundays* on 7210 –
 14.30–22.00 *Saturdays* on 7210 –

Announcements: Mediumwaves: "Dette er Norsk Rikskringkasting". – Shortwaves: "This is Radio Norway with its shortwave service for Norwegian abroad". In *Samisk*: "Dat la Norga Rikaradio, Tromsast. Di gullabetet Samgiel programa".

Interval Signal: For all long- and mediumwaves:

Every shortwave-transmission to Norwegians abroad is introduced by a Norwegian folk melody from Hallingdal:

At opening and close down: Choir (Norwegian music).
Message to Listeners: Reports are answered by QSL-cards — and by radio Saturday evening in the English-Norwegian "letter-box" feature program.
Future plans: A 200 kW long-wave transmitter near Oslo under construction.

“What!
my radio set out of date?

Nonsense!”

The reason why owners of old radio receivers seldom believe their sets are out of date is quite simple. As their receivers have slowly deteriorated over a period of years, so have their standards of listening sunk lower and lower accordingly.

But when they hear the latest Philips Radioplayers they realise at once what pleasures they have been missing.

These advanced receivers bring exciting short-wave programmes from all over the world just as easily and accurately as local broadcasts. This is due to the special Philips bandspread tuning system.

What's more, you don't suddenly lose your station as so often happens with the old type of shortwave sets. Philips Rimlock valves and the use of a new material called "Ferroxcube" enable you to stay tuned in to your chosen station for as long as you like. Philips Radioplayers are thoroughly dependable in every way and can be trusted to give first-class entertainment for many years to come. Your Philips dealer will be delighted to give you a demonstration. See him at the earliest possible opportunity.

**ON THE NEW PHILIPS RADIOPLAYERS
YOU GET YOUR FAVOURITE SHORTWAVE
PROGRAMMES QUICKLY, EASILY AND THEY
STAY WITH YOU**

"Those far-off shortwave programmes are much more exciting, of course, but it's so hard to tune them in."
"On ordinary sets, yes. But it's *easy* with the new Philips Radioplayers."

SEE THE DIFFERENCE

Ordinary shortwave tuning is slow, tricky, uncertain — because you've got to get your station within a hair's breadth on the dial like this

But Philips Bandspread Tuning it quick, easy, certain — because all stations are *s-p-r-e-a-d o-u-t* on the dial like this

"And you don't suddenly lose your programme. That's what I like about Philips Bandspread Tuning."

Message to Listeners: OTC welcomes reports from all listeners. They are answered by QSL-card and on the air in the feature "Amongst Friends", which is the forum of the OTC-Amongst Friends Club. This Club was formed two years ago following the suggestion of many regular listeners, in order to provide closer contact between the station and its listeners on one side, and between listeners themselves on the other through the pen-pal section. The club has also a stamp-collectors corner. "Amongst Friends" aims at creating a better understanding between all nations and peoples of the world and at promoting international goodwill. It is a non-profit organization, and membership tokens are forwarded to those who send either one dollar (USA) or 13 international Reply Coupons.

The Finest in Portable Tape Recorders

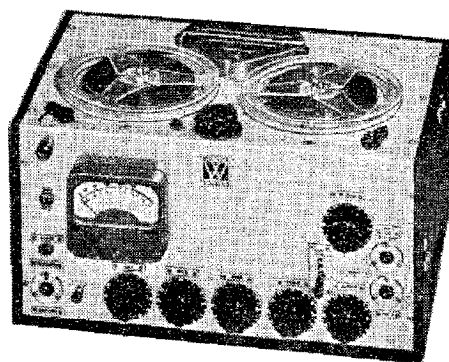

Ekotape Announcer

Ekotape Announcer has been developed expressly to meet the needs of broadcasting studios for a high quality, readily portable magnetic tape recorder. Compact and completely self-contained, except for microphone and A.C. power source, it is ideal for field work and spot recording. At the same time it provides fine tone quality and high fidelity for studio use.

Programs from any source of sound may be recorded and preserved. Simplified controls require a minimum of attention. Ekotape has dual channels of amplification. It may be used as a public address system without any recording on the machine.

Ekotape Network

The Ekotape Network is a professional model magnetic tape recorder for use by radio engineers as a portable unit for remote recording or for recording delayed broadcasts in the studio. It consists of a compact, sturdy, deep blue "no scuff" plastic covered cabinet, containing separate record and playback amplifiers, and the magnetic tape recorder mechanism.

CENTRAL-AND SOUTH AMERICA

1. Radio Programas Continental, Panama City. Trio Istmeno can be heard daily from R.P.C. between 23.30 and 04.00 G. M. T.
2. Radio Cadena Suaritos, Havana Cuba. The famous Cuban artist Miss Avelina London, who can often be heard on 9833 kc/s.
3. Director of the Magloire Circuit, Port au Prince, Haiti 4. Radio Cadena Suaritos, Havana, Cuba. The famous Cuban artist Miss Tona La Negra, who often broadcast on 9833 kc/s

ELECTRICAL MEASURING INSTRUMENTS

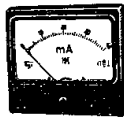

Extract of our manufacturing programme

①

Circular Models

②

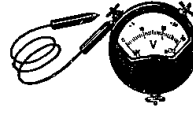

Square Models

SMALL PANEL- AND SWITCHBOARD INSTRUMENTS

All types, sizes single and multiple ranges for DC and AC power frequencies and radio frequencies.

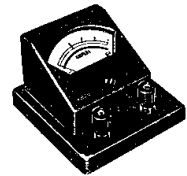

③

SMALL CLOCK-SHAPED PRECISION MODEL

with one or two ranges DC, AC, also as drycell tester

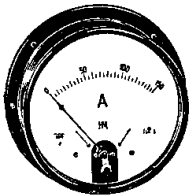

④

SMALL TABLE MODEL

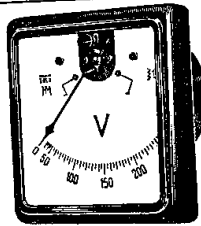

of many single and multiple ranges for DC and AC, also as ZEROPOINT-galvanometer.

⑤

Circular Models

⑥

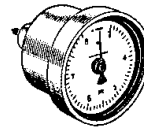

Square Models

LARGE PANEL- AND SWITCHBOARD INSTRUMENTS

In all types and sizes, single and multiple ranges for DC and AC power frequencies and radio frequencies.

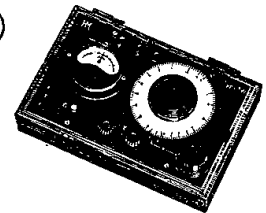

⑦

STATIONARY TACHOMETERS

with different case diameters and shapes. Special Feature: Patented temperature-compensator.

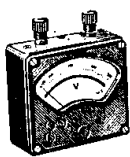

⑧

MEASURING BRIDGES

with self-contained power source, different types and ranges.

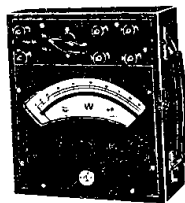

⑨

SMALL PORTABLE INSTRUMENTS

of many types, single and multiple ranges for DC, AC power frequencies and radio frequency pocket-size meters.

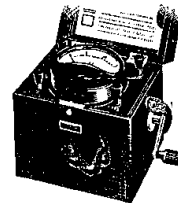

⑩

LARGER PORTABLE INSTRUMENTS

in all types as general testing instruments and as laboratory instruments, single and multiple ranges for DC, AC power frequencies, radio frequency and as pyrometer-measuring instrument.

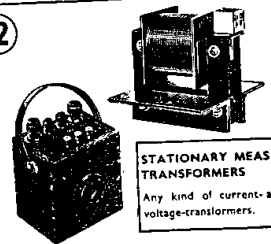

⑪

PORTABLE INSULATION TESTER

with self-contained DC inductor for many MEGOHM-ranges and voltages — DC and AC ranges.

⑫

STATIONARY MEASURING TRANSFORMERS

Any kind of current- and voltage-transformers.

PORTABLE MEASURING TRANSFORMERS

Any kind of current-transformers, single and multiple ranges.

⑬

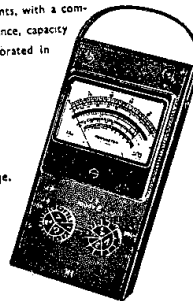

TOVAMETER

Universal AC/DC instrument with 30 ranges for volt-milliamper-ampere measurements, with a common linear graduation from zero (patented device). In addition it can measure resistance, capacity and power (decibels). Self-contained power supply. The following ranges are incorporated in the instrument:

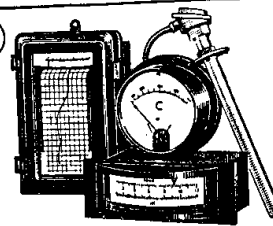

Direct-Current: 1, 10, 100, 1000 mA, 10 Amp.
DC Voltage: 0.1, 2.5, 10, 100, 250, 1000 Volts.
Alternating-Current: 1, 10, 100, 1000 mA, 10 Amp.
AC Voltage: 2.5, 10, 50, 100, 250, 1000 Volts.
Output-meter: -20, 0, +10 db with 0 db at 50 mW on 50 Ω range.
Output-meter: -20, 0, +10 db with 0 db at 50 mW on 5000 Ω range.

Ohm-meter: 0 - 1000; 0 - 10000; 0 - 100000 Ohms.
Ohm-meter: 0 - 10 M Ω at 220 V., 0 - 20 M Ω at 440 V.
Capacity measurements: 5 pF - 0.05 pF, 50000 pF - 500 pF.

We can supply separate shunts and small current-transformers, so that additional ranges up to 1000 amps. DC and 500 amps. AC can be obtained.

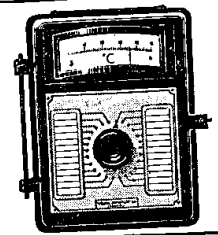

⑭

PYROMETERS

Any kind of indicating, regulating and registering instruments, further thermoelements for any purpose.

⑮

ELECTRICAL-RESISTANCE-THERMOMETER-UNITS

for remote measuring control of until 35 points in watertight or open types.

We can offer you many other kinds of electrical measuring instruments not mentioned in this extract, and should you require further information please request our catalogues, lists and drawings. NOTE: Please quote the appropriate encircled number with all inquiries.

STANDARD FREQUENCIES AND TIME SIGNALS WWV AND WWVH

Radio Frequencies and Locations

Station WWV (near Washington) broadcasts continuously, night and day, on standard radio frequencies of 2.5, 5, 10, 15, 20, 25, 30 and 35 Mc.

Station WWVH Central Radio Propagation Laboratory, Field Station, PA Box 901, Puunene, Maui, Hawaii broadcasts on standard radio frequencies of 5, 10 and 15 Mc. (0.4 kW). Continuous operation except 0900 to 0934 A. M. each day for calibration purposes and 4 minutes and 20 seconds after each hour and half-hour.

Time, Tone and Frequency same as WWV. — *Listeners reports* are answered by letter. Supervising Electronic Engineer is Mr. Leo W. Honea and Engineer in Charge of WWVH Mr. Sadami Katahara. —

Audio Frequencies and Musical Pitch

Two standard audio frequencies, 440 cycles per second and 600 cycles per second, are broadcast on all radio carrier frequencies except 30 and 35 Mc. The audio frequencies are given alternately, starting with 600 c on the hour for four minutes, interrupted one minute, followed by 440 c for four minutes, and interrupted one minute. Each ten-minute period is the same. The 440 cycles per second is the standard musical pitch, A above middle C.

Time Signals and Standard Time Intervals

The audio frequencies are interrupted for intervals of precisely one minute. They are resumed precisely on the hour and each five minutes thereafter. They are in agreement with the basic time service of the U.S. Naval Observatory so that they mark accurately the hour and the successive 5-minute periods.

Greenwich Mean Time is announced in telegraphic code each five minutes starting with 0000 at midnight. Time announcements are with reference to return of the audio frequencies.

A voice announcement of Eastern Standard Time follows each telegraphic code announcement from station WWV.

There is a pulse on each carrier frequency of precisely one second. The pulse is heard as a faint tick when listening to the broadcast.

Radio Propagation Disturbance Warning Notice from WWV

An announcement of radio propagation conditions is broadcast in code on each of the standard radio frequencies at nineteen and forty-nine minutes past the hour. If a warning is in effect, the letter "W" (in International Morse Code) is repeated 6 times following the time announcement; if unstable conditions are expected, the letter "U" is repeated 6 times; if there is no warning, the letter "N" is repeated 8 times.

O. I. R.'s

Documentation and Information

BULLETIN

published in English, French and Russian gives you every 3 months a lot of valuable information on what is going on in the world of Broadcasting.

**You participate in an
INTERNATIONAL hobby,**

**Why not join an
INTERNATIONAL radio club?**

Short Wave Listening and amateur radio floods over the bounds of narrow nationalism. It is the greatest influence for world peace and comradeship of any human activity. Our aim in the International Short Wave League is to foster and promote international goodwill through the medium of our hobby, and to provide facilities for all to enjoy their hobby to the full.

Why not join us and help us to fulfil this very WORTHWHILE aim?

Membership fee—2.6 per annum

**The International Short Wave
League**

57 Maida Vale, LONDON, W.9

TIME TABLE

DIFFERENCE BETWEEN LOCAL TIME AND GREENWICH MEAN TIME

The differences marked + indicate the number of hours ahead of G. M. T. Differences marked ÷ indicate number of hours behind G. M. T.

In the interest of World Radio and a better understanding between all nations and peoples of the world we wish to get into touch with interested listeners in all countries who will act as correspondents for "The World Radio Handbook" and in that capacity work for the spreading of knowledge about it. Write to "World Radio Handbook", Lindorffalle 1, Hellerup, Denmark, for further particulars.

**Covers every
aspect of modern
radio, television
and electronics**

The world's leading Radio journal

Founded nearly 40 years ago, WIRELESS WORLD provides a complete and accurate survey of the newest British technique in design and manufacture. Critical reviews of the latest equipment broadcast receivers and components of all types are regularly included. Theoretical articles deal with design data and circuits for every application. Each

issue is profusely illustrated and news from all parts of the world is fully reported. Monthly 2s. £1.6s.0d. yearly. From the address below.

Wireless World

Technical books published in conjunction with "Wireless World"

FOUNDATIONS OF WIRELESS (4th Edition)

M. G. Scroggie, B. Sc., M. I. E. E. Explains the principles on which the design and operation of modern receivers are based. It also covers the elementary principles of transmitters. 258 pp. 7s.6d. By post 7s.10d.

RADIO DATA CHARTS (5th Edition)

R. T. Beatty, M. A., B. E., D. Sc., revised by J. M. G. Sowerby, B. A. Grad. I. E. E.

43 Abacs for receiver design calculations, covering the most frequently recurring problems, the answers to which provide most of the data needed for the design of radio receivers. 91 pp. 7s.6d. By post 7s.11d.

RADIO LABORATORY HANDBOOK (5th Edit.)

M. G. Scroggie, B. Sc., M. I. E. E.

A practical handbook showing the methods available for carrying out tests and measurements either with commercial instruments or with improvised equipment. 15s. By post 15s.5d.

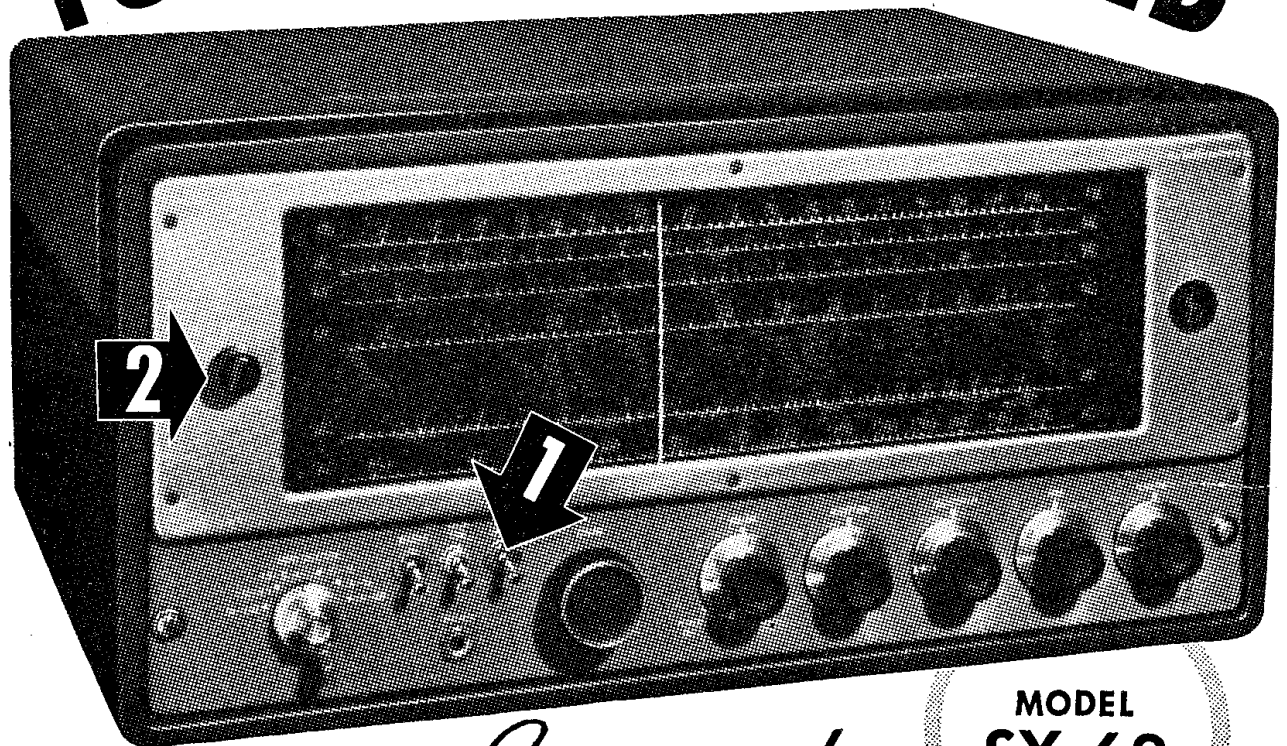

SHORT-WAVE RADIO AND THE IONOSPHERE (2nd Edition)

T. W. Bennington. This book presents all the available information on the ionosphere in a simple form so that it is of use to those with only a limited technical knowledge. It shows how existing ionospheric data can be applied to everyday problems of short-wave transmission and reception. 10s.6d. By post 10s.10d.

ILIFFE AND SONS LTD., DORSET HOUSE, STAMFORD STREET, LONDON, S. E. 1.

Built to
TUNE IN THE WORLD

MODEL
SX-62

...IN **3** *Easy* STEPS!

1 Flip on crystal CALIBRATION OSCILLATOR. Test signals will appear at 500 kc intervals on all DX Bands.

2 Use RESET CONTROL to adjust dial pointer to exact frequency of oscillator signal.

3 You're then "on frequency" with pin-point accuracy. If desired station is there to be heard, you'll bring it in!

The *Only Radio* with all these features:

- High-fidelity reception on all wave bands —Standard Broadcast, FM and Short Wave.
- World-wide frequency range, with continuous coverage from 540 kc through 110 Mc, AM or FM!
- Flexibility of control, with six degrees of selectivity, separate sensitivity and volume controls, plus automatic noise limiter and beat frequency oscillator.
- Ease of tuning with hair-line accuracy. Six broad scales with over 150 stations marked; calibration oscillator for checking frequency as explained above.
